

# Benefits of Turnstile-Based Destination Dispatch

Integrating access control and destination assignement at the turnstile

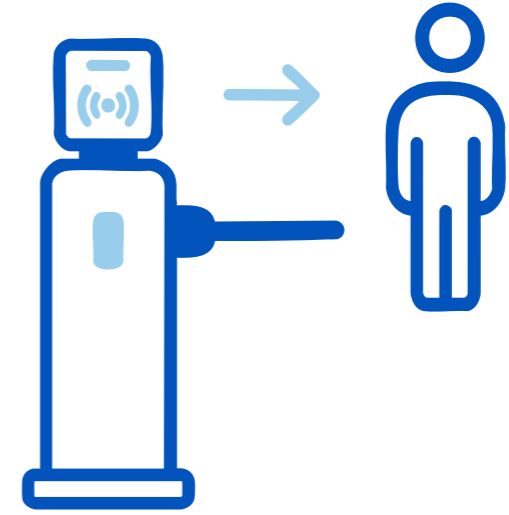

## One Interaction, Not Two

- One credential interaction both opens the gate and gives the destination call

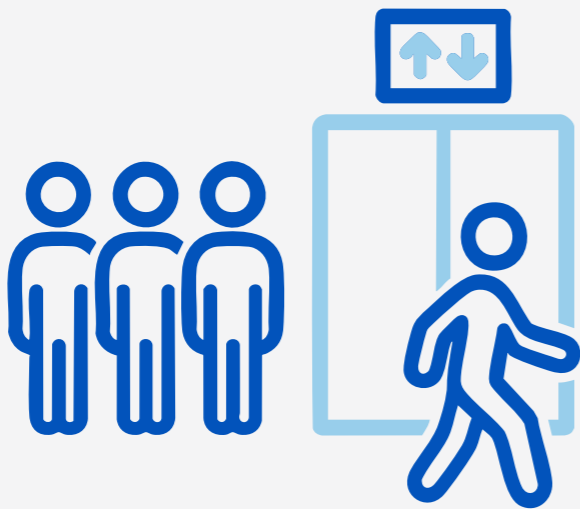

## One Call Per Person

- Turnstile enforce one-call-per-person, improving the accuracy of car assignment

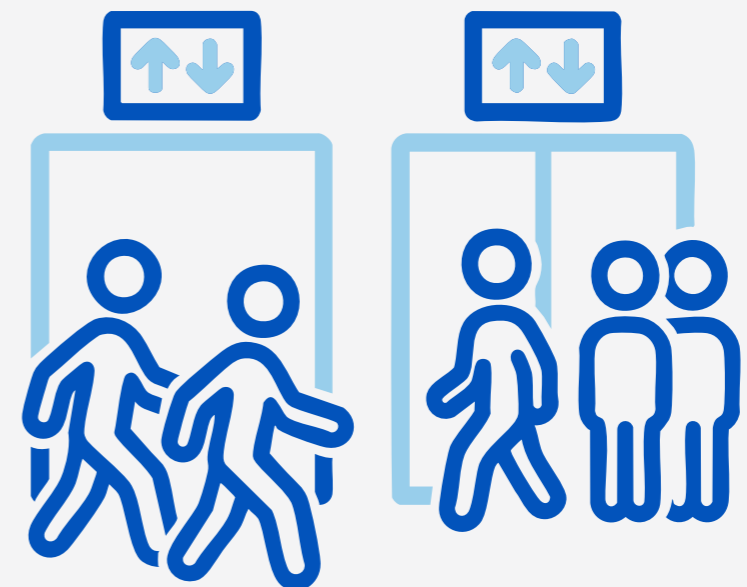

## Turning “Wait Time” into “Walk Time”

- Elevator assignment before the gate turns the walk to the elevator into productive time

## Throughput & Grouping

- Higher effective capacity than kiosk and better grouping at up-peak

## Personalization without Ghost Calls

- Automatic floor assignment for repeat visitors; tentatively until out of suppression window.
