A screenshot of a video monitoring interface. The top navigation bar includes 'Alarms' with a bell icon, 'Events 1' with a circular 'X' icon, and 'Devices'. Below the navigation is a toolbar with icons for video, zoom, and other controls. The main video frame shows a wide-angle view of a warehouse aisle with shelves filled with cardboard boxes. The video is labeled 'Lobby Bank A South' and 'Video Motion'. The bottom of the screen features a control bar with a magnifying glass for search, a date/time selector, and playback controls for zoom, pan, and playback speed (1x, 2x, 3x, 4x, 5x, 6x, 7x, 8x, 9x, 10x). The timestamp at the bottom is 15:02:00.

BluSKY's Elevator Management System (EMS) provides real-time and playback visualization of vertical movement within a facility, tracking car-by-car and group-by-group status, direction, floor stops, and occupants, while offering single-button control for responsive operations and comprehensive insights into elevator activity.

EMS Car View

The EMS Car View provides detailed, real-time and playback visualization of each elevator's position, occupants, direction, stops, door operations, security-controlled floors, and all-call queues, with flexible viewing options for single cars, groups, or combinations.

BluSKY Events Dashboard delivers real-time event monitoring with comprehensive analytics, linking all associated devices and data—including cameras, alarms, card readers, photo IDs, timestamps, and historical insights—enabling swift, informed responses across systems, facilities, or individuals.

Intelligent Event Analysis and Response

BluSKY Events Dashboard leverages AI and historical data to analyze and assess risk levels for every event, providing real-time and long-term summaries to deliver a comprehensive understanding and informed response to security incidents.

Building Oracle Oracle that will help us to call APIs and get stuff done on BluSKY

Building Oracle BluSKY is a cloud-based physical security information management (PSIM) platform developed by BluBOX Security, a company specializing in cloud-based access control systems. BluSKY is designed to integrate various security systems, such as video surveillance, access control, intrusion detection, and visitor management, into a single unified interface. The platform offers features such as real-time monitoring, incident management, customizable reporting, and integration with third-party security systems and devices. BluSKY aims to provide organizations with comprehensive security management capabilities, allowing them to monitor and control their physical security infrastructure from anywhere with an internet connection. Overall, BluSKY helps organizations enhance their security posture by centralizing and streamlining the management of their physical security systems, improving situational awareness, and enabling timely response to security events.

You How many alarms were there on April 7th?

Your Building Oracle Absorbs and Learns Everything Fed into the Data Lake. All Documents, Videos, Audio, Images, Floor Plans, Events, and Analytics. Ask or Command Anything Using Natural Language.

BluSKY aims to provide organizations with comprehensive security management capabilities, allowing them to monitor and control their physical security infrastructure from anywhere with an internet connection. Overall, BluSKY helps organizations enhance their security posture by centralizing and streamlining the management of their physical security systems, improving situational awareness, and enabling timely response to security events.

You

How many alarms were there on April 7th?

Building Oracle

On April 7th, there were a total of 141 alarms reported. This was one of the days with the highest number of alarms in the dataset provided. The alarms on April 7th were significantly higher compared to some other days in the dataset, such as April 6th, which had 125 alarms, and April 8th, which had 102 alarms.

It is interesting to note that April 12th also had 141 alarms, making it another day with a high number of alarm reports. However, it is essential to differentiate between the total number of alarms triggered and specific types of alarms. For instance, on April 12th, there were 4 forced open alarms, which may represent a different category of incidents compared to the general alarm reports.

Looking at the surrounding dates, we see fluctuations in the number of alarms. For example, April 11th had 125 alarms, similar to April 6th, while April 13th had 102 alarms, the same as April 3rd. This variation in the number of alarms each day could indicate different levels of activity or events triggering the alarms.

Overall, April 7th stood out in the dataset with 141 alarms, emphasizing the significance of that particular day in terms of alarm reports.
